ABSTRACTED-PUB-NO: FR 2464682A

BASIC-ABSTRACT:

A curtain or curtain lining comprises a sheet having at least one layer of open-cell foam, e.g. of polyethylene or polyurethane, and at least one layer of metal film, such as aluminium. In one form, the side of the foam not covered by the metal film may be covered by a very thin fabric, possibly with a pile.

The prod. offers excellent capacity and reflective properties, by reason of the metal film layer, and heat and sound installation are conferred by the open-celled foam.
